Others:	

Summary of testing:

Tests performed (name of test and test clause):	**Test location:**

☐ The product fulfils the requirements of _____ :

(insert standard number and edition and delete the text in parenthesis, leave it blank or delete the whole sentence, if not applicable)

Copy of marking plate:

Test item particulars..... :	
Accessories and detachable parts included in the evaluation..... :	
Mounting system used..... :	
Other options included..... :	
Possible test case verdicts:	
- test case does not apply to the test object..... :	N/A
- test object does meet the requirement ..... :	P (Pass)
- test object does not meet the requirement ..... :	F (Fail)
Abbreviations used in the report:	
Pmax – Maximum power	HF – Humidity Freeze
Vmp – Maximum power voltage	DH – Damp Heat
Imp – Maximum power current	TC – Thermal Cycling
Isc – Short circuit current	α – Current temperature coefficient
Voc – Open circuit voltage	β – Voltage temperature coefficient
FF – Fill factor	δ – power temperature coefficient
STC – Standard Test Conditions (25°C, 1 000 W/m²)	NMOT – Nominal Module Operating Temperature (20°C, 800 W/m²)
MQT – Module Quality Tests	VFMrated – Rated diode(s) forward voltage
VFM – Measured diode(s) forward voltage	NP – Nameplate
m_1 – the measurement uncertainty in % of laboratory for Pmax	m_2 – the measurement uncertainty in % of laboratory for Voc
m_3 – the measurement uncertainty in % of laboratory for Isc	t_1 – the manufacturer's rated lower production tolerance in % for Pmax
t_2 – the manufacturer's rated upper production tolerance in % for Voc	t_3– the manufacturer's rated upper production tolerance in % for Isc
r – Pmax measurement reproducibility	
Testing Dates (YYYY-MM-DD)	
Date of first test item received..... :	
Dates of tests (beginning/end)..... :	

General remarks:	
Decision Rule: "(See Enclosure #)" refers to additional information appended to the report. "(See appended table)" refers to a table appended to the report. Throughout this report a ☐ comma / ☐ point is used as the decimal separator. **This Test Report Form is intended for the investigation of PV modules in accordance with IS/IEC 61730-2:2016 in conjunction with IS/IEC 61730-1:2016**	
Name and address of factory (factories) ..... :

General product information:

Modifications:

☐ Initial module design qualification

☐ Extension of module design qualification

☐ Original test report ref. no. ..... :

Model differences and modification:

☐ Test programs for crystalline silicon PV modules

- ☐ 4.2.1 Modification to frontsheet
- ☐ 4.2.2 Modification to encapsulation system
- ☐ 4.2.3 Modification to cell technology
- ☐ 4.2.4 Modification to cell and string interconnect material or technique
- ☐ 4.2.5 Modification to backsheet
- ☐ 4.2.6 Modification to electrical termination
- ☐ 4.2.7 Modification to bypass diode
- ☐ 4.2.8 Modification to electrical circuitry
- ☐ 4.2.9 Modification to edge sealing
- ☐ 4.2.10 Modification to frame and/or mounting structure
- ☐ 4.2.11 Change in PV module size
- ☐ 4.2.12 Higher or lower output power (by 10 % or more) with the identical design and size and using the identical cell process
- ☐ 4.2.13 Increase of over-current protection rating
- ☐ 4.2.14 Increase of system voltage
- ☐ 4.2.15 Change in cell fixing tape

☐ Test programs for thin-film PV modules

- ☐ 4.3.1 Modification to frontsheet
- ☐ 4.3.2 Modification to encapsulation system
- ☐ 4.3.3 Modification to front contact (e. g. TCO)
- ☐ 4.3.4 Modification to cell technology
- ☐ 4.3.5 Modification to cell layout
- ☐ 4.3.6 Modification to back contact
- ☐ 4.3.7 Modification to edge deletion
- ☐ 4.3.8 Modification to interconnect material or technique
- ☐ 4.3.9 Modification to backsheet
- ☐ 4.3.10 Modification to electrical termination
- ☐ 4.3.11 Modification to bypass diode
- ☐ 4.3.12 Modification to edge sealing
- ☐ 4.3.13 Modification to frame and/or mounting structure
- ☐ 4.3.14 Change in PV module size
- ☐ 4.3.15 Higher or lower output power (by 10 % or more) with the identical design and size
- ☐ 4.3.16 Increase of over-current protection rating
- ☐ 4.3.17 Increase of system voltage

6 SAMPLING			
	☐ The modules tested (modules and laminate) were taken at random from a production batch and subjected to manufacturer's normal quality control and inspection for safety testing		
	☐ The modules tested (modules and laminate) were prototypes of a new design and not taken from a production batch.		
	☐ Preconditioning of test samples were performed within IS 14286 performance testing		
	☐ Preconditioning of test samples were performed separately from IS 14286 performance testing		
Supplementary information:			

Module group assignment:				
Sample #	Sample Group ID	Type/model	Sample S/N	Remark
1	Control			
4	F			
5	C			
7	D			
9	E			
13	A			
14	B			
15	B1			
16	G			
17	Ignitability			
18	Module-Break			
19	Peel-Reference			
	Lap shear			
	Fire test			
Remarks:				

Note (1) Use the "General product information" field to give any information on model differences within a product type family covered by the test report and describe the range of electrical and safety ratings, if the TRF covers a type family of modules.

Note (2) Use Annex 2 to list the used materials and components of the module (manufacturer/supplier and type reference)

Note (3) The module numbers/identifiers are set in accordance to IEC 62915 Photovoltaic (PV) modules – Retesting for type approval, design and safety qualification, Annex A3 of IEC 62915

IS/IEC 61730 PART 1: REQUIREMENTS FOR CONSTRUCTION

4 Classification, applications and intended use			
4.1 General			
	The module has been evaluated for the following Class (IEC 61140)……:	☐ Class 0 ☐ Class II ☐ Class III	—
4.5 Intended use			
	PV modules are installed in the following special applications:		—
	Building attached PV (BAPV)	☐ yes ☐ no	—
	Building integrated PV (BIPV)	☐ yes ☐ no	—
	Applications in areas where snow and / or wind load exceeding loads as tested in IS/IEC 61730-2: 2016 are expected	☐ yes ☐ no	—
	Applications at environmental temperature exceeding the limits indicated in of IS/IEC 61730-1:2016	☐ yes ☐ no	—
	other (please specify)	☐ yes, as follows: ☐ no	—
5 Requirements for design and construction			
5.1 General			—
	PV module suitable for operation in outdoor non-weather protected locations, exposed to direct and indirect (albedo) solar radiation, in an environmental temperature range of at least –40°C to +40°C and up to 100 % relative humidity as well as rain.		
	Product shipped from the factory as	☐ completely assembled ☐ subassemblies	—
	The provided assemblies of the product do not involve any action that is likely to affect compliance with the requirements of the IS/IEC 61730 series.		
	Incorporation of a PV module into the final assembly does not require any alteration of the PV module from its originally evaluated form.		
	Equipotential bonding continuity is not interrupted by installation		
	Any adjustable or movable structural part are provided with a locking device		
	PV modules have no accessible burrs, sharp edges or sharp points	See Table 45	
	Parts are prevented from loosening or turning	See Table 47 and 48	

5.2 Marking and documentation			
5.2.1	Instructions related to safety are in an official language of the country where the equipment is to be installed.		
5.2.2 Marking			
5.2.2.1 General			
	Each PV module includes the following clear and indelible markings:		—
	a) Name, registered trade name, or registered trade mark of manufacturer		
	b) Type or model number designation		
	c) Serial number		
	d) Date and place of manufacture; alternatively serial number assuring traceability of date and place of manufacture		
	e) Polarity of terminals or leads		
	f) “Maximum system voltage” or ”Vsys”		
	g) Class of protection against electrical shock, in accordance with Clause 4 of IS/IEC 61730-1:2016		
	h) “Voltage at open-circuit” or “Voc” including manufacturing tolerances		
	i) “Current at short-circuit” or “Isc” including manufacturing tolerances		
	j) “PV module maximum power” or “Pmax” including manufacturing tolerances		
	k) “Maximum overcurrent protection rating”	See Table 34	
	All electrical data are shown as relative to standard test conditions (STC) (1 000 W/m^2, (25 ± 2) °C, AM 1.5 according to IEC 60904-3).		
	International symbols are used where applicable.		
	PV connectors or wiring are marked in accordance to IEC 62852 with a symbol „Do not disconnect under load”.		
	Symbol or warning notice are imprinted or labelled close to connector		
	PV connectors are clearly marked indicating the terminal polarity.		
	For Class II and Class 0 PV modules, the  (IEC 60417-6042: Caution, risk of electric shock) symbol is applied near the PV module electrical connection means.		

	PV modules are marked to indicate the class	☐ class II: ☐ ☐ class III: III ☐ class 0: no symbol	
	PV modules provided with a functional earth connection (see section 5.2.2.2.2)	—	—
	PV modules with terminals for field wiring rated only for use with copper wire are marked, at or adjacent to the terminals, with the statement "Use copper wire only", "Cu only", or the equivalent.		
	PV modules with terminals for field wiring rated only for use with a different specific wiring material are marked with a similar statement referring to the rated material.		
5.2.2.2 Symbols			
5.2.2.2.1 Equipotential bonding			
	Bonding conductor for equipotential bonding is identified with:	☐  ; ☐ 	
	No other terminal or location is identified in this manner		
5.2.2.2.2 Functional earthing			
	Field installed functional earthing conductor is identified with the symbol:		
5.2.3 Documentation			
	Documentation concerning electrical and mechanical installation provided.		
	Class (see 5.2.2.1) is stated, including specific limitations required for that Class.		
	Environmental conditions to which the module has been qualified are stated.		—
	concerning temperature range, typically -40 °C to +40 °C		
	concerning wind/snow load including safety factor		
	Documentation for safe installation, use, and maintenance is available for installers and operators.		
	The documentation contains the following information:		—
	– Name, registered trade name, or registered trade mark of manufacturer		
	– Type or model number designation		
	– “Maximum system voltage” or ”Vsys”		
	– Class of protection against electrical shock		
	– “Voltage at open-circuit” or “Voc” including manufacturing tolerances at STC		

	– “Current at short-circuit” or “Isc” including manufacturing tolerances at STC		
	– “PV module maximum power” or “Pmax” including manufacturing tolerances at STC		
	– “Maximum overcurrent protection rating”	See Table 34	
	– Recommended maximum series / parallel PV module configurations		
	– Temperature coefficient for voltage at open-circuit		
	– Temperature coefficient for maximum power		
	– Temperature coefficient for short-circuit current		
	All electrical data shall be shown as relative to standard test conditions (1 000 W/m^2, (25 ± 2) °C, AM 1.5 according to IEC 60904-3).		
	International symbols are used		
	The electrical documentation includes a detailed description of the electrical installation wiring, including:		
	– Minimum cable diameters for PV modules intended for field wiring		
	– Limitations on wiring methods and wire management that apply to the junction box for the PV module		
	– Size, type, material, and temperature rating of the conductors		
	– Type of terminals for field wiring		
	– Specific PV connector model / types and manufacturer to which the PV module connectors can be mated		
	– The bonding method(s), if applicable, is specified including all provided or specified hardware		
	– The type and ratings of bypass diode to be used (if applicable)		
	– Limitations to the mounting situation (e.g. slope, mounting means, cooling)		
	– A statement indicating	☐ fire rating(s) and applied standards ☐ statement regarding resistance to external fire sources not evaluated	
	– Limitations regarding fire ratings (e.g. installation slope, sub structure or other applicable installation information)		

	– A statement indicating the minimum mechanical means for securing the PV module	See Table 14	
	– A statement indicating the maximum altitude		
	The documentation for roof mounting includes:		—
	– A statement indicating the minimum mechanical means for securing the PV module to the roof	See Table 14	
	– Specific parameter(s) when the fire rating is dependent on a specific mounting structure are provided e.g. specific spacing, or specific means of attachment to the roof or structure.		
	A statement concerning artificially concentrated sunlight		
	Assembly instructions are provided with a product shipped in subassemblies, and are detailed and adequate to the degree required to facilitate complete and safe assembly of the product		
	The installation instructions include relevant parameters specified by manufacturer or the following statement or the equivalent: *"Under normal conditions, a photovoltaic module is likely to experience conditions that produce more current and/or voltage than reported at standard test conditions. Accordingly, the values of ISC and VOC marked on this module should be multiplied by a factor of 1,25 when determining component voltage ratings, conductor current ratings, and size of controls connected to the PV output."*		

5.3 Electrical components and insulation			
5.3.2 Internal wiring			
	Internal wiring has sufficient current carrying capacity for the relevant application.	See Table 34	
5.3.3 External wiring and cables			
	External wires and cables fulfil the requirements of	☐ EN 50618 ☐ IEC 62930.	
5.3.4 Connectors			
	External DC connectors fulfil the requirements of IEC 62852.		
5.3.5 Junction boxes for PV modules			
	Junction boxes for PV modules fulfil the requirements of IEC 62790.		
5.3.6 Frontsheets and backsheets			
	Frontsheet:		—

	Material Frontsheet:	☐ Glass ☐ Polymeric material ☐ Others.	—
	Polymeric frontsheets meet relevant requirements of section 5.5.2	See 5.5.2	
	Polymeric frontsheets used as relied upon insulation fulfil requirements of		—
	- 5.6.4.3 for insulation in thin layers	See 5.6.4.3	
	- 5.5.2.3 for electrical insulation	See 5.5.2.3	
	Thermal index frontsheet (see also 5.5.2.3.3):	☐ TI : ☐ RTE : ☐ RTI :	—
	Adhesion to encapsulant or glass is appropriate	Compliance is checked by test sequences of IS/IEC 61730-2: 2016 listed in this report.	
	Backsheet:		—
	Material Backsheet:	☐ Glass ☐ Polymeric material ☐ Others.	—
	Polymeric backsheets meet relevant requirements of section 5.5.2	See 5.5.2	
	Polymeric backsheets used as relied upon insulation fulfil requirements of		
	- 5.6.4.3 for insulation in thin layers	See 5.6.4.3	
	- 5.5.2.3 for electrical insulation	See 5.5.2.3	
	Thermal index backsheet (see also 5.5.2.3.3):	☐ TI : ☐ RTE : ☐ RTI :	—
	Adhesion to encapsulant or glass is appropriate	Compliance is checked by test sequences of IS/IEC 61730-2: 2016 listed in this report.	
5.3.7 Insulation barriers			
	Polymeric insulation barrier meets the relevant requirements of 5.5.2	See 5.5.2	
	Barrier held in place while keeping its required electrical and mechanical properties		
	Removal of barrier only possible by using a tool		
5.3.8 Electrical connections			
5.3.8.1 General			
	Terminations are so designed, that the contact pressure is not transmitted through insulating material except ceramic, mica or other adequate material. Compliance checked by MST 01		
	Measures are taken to prevent connections becoming loose, e.g. by using a washer.	See Table 11 and Table 48	
	End of a stranded conductor is not consolidated by soft soldering.		

	Measures are taken to prevent contact stress impairing electrical conductivity.		
5.3.8.2 Terminals for external cables and PV connector ribbons			
	Terminals for electrical connections are suitable for the type and range of conductor cross-sectional areas and meet the relevant requirements of IEC 62790.		
	Insulated terminals are designed such that a reduction of clearances and creepage distances by displacement is prevented.		

5.3.8.3 Splices and connections inside a PV module			
	Splices and connections are mechanically secured and provide electrical continuity.		
	Electrical connections are soldered, welded, conductively adhered, crimped, or otherwise securely connected.		
	A soldered or conductively adhered joint is additionally mechanically secured.		
5.3.9 Encapsulants			
	Thermal properties are sufficient for intended application.		
	The insulation properties according to 5.5.2.3 are met, if applicable.	See 5.5.2.3.2	
5.3.10 Bypass diodes			
	Bypass diodes are rated to withstand the current and voltage for their intended use.	See Table 31 and Table 46	
5.4 Mechanical and electromechanical connections			
5.4.1 General			
	Type of connection:	☐ Connection within frame ☐ Mounting interfaces via adhesive ☐ frame to clamp a mounting system ☐ Equipotential bonding ☐ Attachment of junction box ☐ mechanical connections within the laminate:	
	Mechanical connections are durable to withstand the thermal, mechanical, and environmental stresses occurring in the application.	See Table 38, Table 13 and Table 11	
	Removable parts are only detachable with the aid of tools.		
	Lids attached without screws have one or several detectable facilities for enabling tools.		
	No contact of tools with the live parts when the lid is removed.		
	No friction between surfaces as the sole means to inhibit the turning or loosening of a part, unless provisions to prevent unintended movement or rotation of the component is given.		
5.4.2 Screw connections			
	Screws and mechanical connections withstand the mechanical stresses occurring in normal use.		
	Screws are not made of a material which is soft or liable to creep.		
	Screws used to provide mechanical stability and continuity for equipotential bonding withstand the mechanical stresses occurring in normal use.		

	At least one screw per electrical- mechanical connection ensures the electrical connection between the metallic components		
	Screws used for mechanical and electrical connections with a nominal diameter of less than 3 mm are screwed into metal.		
	For screws used for mechanical and electrical connections two full threads are engaged into the metal.		
	Screwed and other fixed connections are in such a way that they do not come loose through torsion, bending stresses, vibration, etc.		
5.4.3 Rivets			
	Rivets which serve as electrical as well as mechanical connections are locked against loosening.		
5.4.4 Thread-cutting screws			
	Thread-cutting and self-tapping screws are not used for interconnection of current-carrying parts made of a material which is soft or liable to creep.		
	No thread-forming or thread-cutting (self-tapping) screws (sheet metal screws) are used for the connection of current-carrying parts.		
	Thread-cutting (self-tapping) screws not be used if they are likely to be operated by the user or installer.		
	Thread-cutting and thread-forming screws, used to provide continuity for equipotential bonding, are such that it is not necessary to disturb the connection in normal use.		
	For equipotential bonding one screw is permitted if two full threads engage the metal		
5.4.5 Form/press / tight fit			
	Form/press/tight fits of metallic components which are not separately equipotentially bonded are electrically connected.		
	Requirements of MST 32 and MST 34 are met, continuity of equipotential bonding (MST 13) is provided before and after the MST 32 and MST 34 tests	See Table 38, Table 39 and Table 11	
5.4.6 Connections by adhesives			
	Connections by adhesive for mounting means are sufficient.	See Table 38, Table 39 and Table 11	
	Fixing of junction box by adhesive is sufficient.	See Table 27, and Table 10	
	Adhesion of a polymer relied upon for insulation to another insulating layer is appropriate for the application.		
	Requirements for adhesive materials are met	See 5.5.4	

	Connection by adhesive which is considered as cemented joint fulfils the requirements of 5.6.4.2.	See 5.6.4.2	
5.4.7 Other connections			
	Other connections such as, welded or soldered, as well as Materials and processes for creating the connections are appropriate for the application and for the intended use.	See Table 6 and Table 43	
	Other connections which are relied upon for equipotential bonding fulfil the requirements of (MST 13).	See Table 11	
5.5 Materials			
5.5.2 Polymeric materials			
5.5.2.1 General			
	Polymeric materials are able to durably and safely withstand the electrical, mechanical, thermal, environmental, and corrosive stresses occurring in the application.	Assessed polymeric parts see Annex 2 (BOM). Test results see subsequent sections	
	Polymeric materials are resistant to electrical and mechanical property degradation.	Test results see subsequent sections	
	Polymeric parts which ensure either the electrical or mechanical safety of the PV module, or both, are resistant to electrical and mechanical property degradation.	Test results see subsequent sections	
	They comply with the requirements of the materials creep test (MST 37) depending on their constructive function in the PV module.	See Table 13	
	Polymeric material used as a part of a cemented joint fulfils additionally the requirements of 5.6.4.2.	See 5.6.4.2	
5.5.2.2 Endurance to weathering stress			
	Polymeric materials of the module and its components are durable to weathering stress.	Test results see subsequent sections	
5.5.2.3 Polymeric materials used as electrical insulation			
5.5.2.3.1 General			
	Material relied upon for insulation are of adequate thickness, as described in Tables 3 and 4.	See Table 49 and Annex 2 (BOM)	
	The temperature limits of materials used as insulation are not less than the maximum measured operating temperature of the specific material in application, as measured during the temperature test (MST 21).	See Table 32	
5.5.2.3.2 Endurance to electrical stress			
	Materials used as electrical insulation are in compliance with the insulation coordination requirements	See 5.6.3	
5.5.2.3.3 Endurance to thermal stress			
	Materials used as relied upon insulation have a mechanical and electrical relative thermal endurance, relative thermal index or temperature index (RTE/RTI or TI) appropriate for the application, at least 90 °C.	☐ TI : ☐ RTE : ☐ RTI : Assessed polymeric parts see Annex 2 (BOM) See Table 32	
5.5.2.3.4 Polymeric insulating materials used as external parts			

	External polymeric parts of the PV module meet the following requirements:		
	- flammability class minimum V-1	Assessed polymeric parts see Annex 2 (BOM)	
	- ball pressure test with a temperature of 75 °C		
	- ignitability test in final application	See Table 37	
	- peel test of cemented joints	See Table 39	
	- lap shear strength test	See Table 40	
5.5.2.3.5 Polymeric insulating parts supporting live parts			
	External parts of insulating material supporting live parts including connections, and parts of polymeric material providing supplementary insulation or reinforced insulation, are sufficiently resistant to heat.	Assessed polymeric parts see Annex 2 (BOM)	
	Polymeric parts which are not components of the laminate fulfil the requirements of ignitability test	Assessed polymeric parts see Annex 2 (BOM) See Table 37	
	Other than elastomeric polymeric materials meet the following requirements:		
	- flammability class minimum HB	Assessed polymeric parts see Annex 2 (BOM)	
	- ball pressure test with a temperature of 125 °C		
	- material creep test	See Table 13	

5.5.2.4 Polymeric materials used for mechanical functions			
	Materials used for mechanical functions have a mechanical relative thermal endurance, relative thermal index or temperature index (RTE/RTI or TI) appropriate for the application, at least 90 °C.	☐ TI : ☐ RTE : ☐ RTI : Assessed polymeric parts see Annex 2 (BOM) See Table 32	
5.5.3 Metallic materials			
5.5.3.1 General			
	Metal parts are not in contact to metal parts having a difference of their electrochemical potentials of more than 600 mV.	Assessed parts see Annex 2 (BOM)	
	Iron or mild steel are plated, painted, or enamelled for protection against corrosion.		
	Corrosion protection is at least equivalent to a zinc coating of 0.015 mm thickness	Assessed parts see Annex 2 (BOM) See Table 6	
5.5.3.2 Current carrying parts			
	Assessed parts:	See Annex 2 (BOM)	
	Current-carrying parts have sufficient mechanical strength and electrical conductivity.	See Table 32 See Table 34 See Table 11	
	Current-carrying materials are protected against corrosion.		
	The coating for protective coated metal is capable of preventing corrosion according to either one of the listed standards.	☐ ISO 1456 ☐ ISO 1461 ☐ ISO 2081 ☐ ISO 2093	
	Coated metal not used if the current-carrying parts are stressed by abrasion.		
5.5.4 Adhesives			
	Adhesives are appropriate for the application.	See Tables 40, Table 39, Table 27, Table 29, Table 12, and Table 10	
	Adhesive as part of the relied upon electrical insulation meets the requirements of 5.5.2.3.3	See 5.5.2.3.3	
5.6 Protection against electric shock			
5.6.1 General			
	Adequate protection against contact with hazardous live parts provided		
	Specimen pose no risk of electric shock.		
5.6.2 Protection against accessibility to hazardous live parts			
5.6.2.1 General			
	Class of module	See safety ratings	—
	For class 0 and Class II modules adequate protection against accessibility to hazardous live parts (> 35 V DC) provided.	See Table 12	

Table 2 of 5.6.2.3	For Class 0 PV modules, accessible metal parts and accessible surfaces as well as live parts of different potential of the same circuit are separated by at least basic insulation.		
	For Class II PV modules construction provide separation between accessible parts or accessible surfaces and hazardous live parts by double or reinforced insulation.		
Table 2 of 5.6.2.3	For Class II PV modules, live parts of different potential of the same circuit are separated by double or reinforced insulation.		
	For Class III PV modules separation between accessible parts or accessible surfaces and hazardous live parts by functional insulation.		
Table 2 of 5.6.2.3	In Class III PV modules live parts of different polarity are separated by at least functional insulation.		
	Materials used for realizing protection against accessibility of hazardous live parts by means of enclosure, insulation barrier or relied upon insulation comply with the requirements of 5.5.2 due to their application.		
5.6.2.2 Protection by means of enclosures and insulation barriers			
	Enclosures or insulation barriers are so designed that, after mounting, the live parts are not accessible (even after possible deformation)		
	Degree of protection of the housing is not impaired by any possible deformation.		
	Parts of enclosures and insulation barriers that provide protection are not removable without the use of a tool.		
	Lids which are attached without screws have one or several detectable features, e.g. recesses,		
	Tool to open the lid do not come into contact with the live parts if lid is removed correctly.		
	Insulation barrier are held in place and are not affected by influences expected during normal operation. Electrical and mechanical properties don’t fall below the minimum acceptable values for the application.		
	Parts are prevented from loosening or turning.		
5.6.2.3 Protection by means of insulation of live parts			
	Insulation materials providing the sole insulation between a live part and an accessible metal part, or between uninsulated live parts not of the same potential, are of adequate thickness and of a material appropriate for the application.		
	Requirements of Table 2	see 5.6.2.1 of this report	—

5.6.3 Insulation coordination			
5.6.3.1	Components comply with the requirements for their relevant standards	See Annex 2	
5.6.3.2	Pollution degree	See Table 1, Table 2, Table 3	—
5.6.3.3	Material group	See Table 1, Table 2, Table 3	—
5.6.3.4	Clearance and creepage distance	See Table 1, Table 2, Table 3, Table 4	
	Derating factor for altitude above 2000 m is considered		
5.6.4 Distance through insulation (dti)			
5.6.4.1 General			
	Polymeric materials for cemented insulation parts and insulation in thin layers shall withstand environmental, thermal, electrical and mechanical stresses as far as they occur.	See 5.5.2	
	Distances through insulation (dti) of solid insulation comply with the minimum distance as required:		
	System voltage…….:	See safety ratings	—
	Distance through insulation req./meas. (mm):		
	The insulation fulfils the material classification as given in IEC 60216-1, IEC 60216-2 and IEC 60216-5 (RTE/TI/RTI).	See annex 2	
5.6.4.2 Cemented joints			
	Cemented joints were considered as	☐ Edge seal ☐ Interface between Junction Box and mounting surface ☐ others	—
	Distances along cemented joints comply with the minimum distances as required in table 3 or table 4:		
	System voltage…….:	See safety ratings	—
	Distance along cemented joints req./meas. (mm):		
	A distance can be considered as cemented joint if following requirements are met:		—
	- Neither cracks nor voids in the insulating compounds have been occurred which either by themselves or in combination reduces the distances through the cemented joint below the required values.		
	- No breakdown at MST 16 (initial and final test)with a 1,35 times higher tests voltage:		
	Test voltage (V):		—
	No breakdown at MST 17 (initial and final test)with a 1,35 times higher tests voltage:		
	Test voltage (V):		—

	The electrically insulating adhesive/sealant have a volume resistivity:		—
	- of greater than 50 × 10^6 Ω cm (dry)		
	- and greater than 10 × 10^6 Ω cm (wet).		
	☐ rigid / rigid: lap shear test MST 36 ☐ rigid / flexible: Peel test MST 35	See Table 40 and Table 39	
	Supplement information: Above mentioned tests have to be performed for each cemented joint. Also the materials and their properties have to be listed in annex 1		
5.6.4.3	**Insulation in thin layers**		
	Relied upon insulation in thin layers is applied at	☐ Backsheet ☐ Front sheet ☐ insulation within laminate ☐ others	—
	Initial Construction of Insulation in thin layers complies with requirements concerning thickness under consideration of figure 4 as described in table 3 or 4	See Annex 2	
	Construction of Insulation in thin layers complies with requirements concerning RTE/TI/RTI	See Annex 2	
	Insulation in thin layers provide sufficient dielectric strength:	See Annex 2	—
	Test voltage for single-layer sheet and for entire multi-layer sheet providing relied upon insulation (2000V + 4 times system voltage)…….:	See Annex 2	
	Test voltage for each layer of a multi-layer providing relied upon insulation (1000V + 2 times system voltage)…….:	See Annex 2	
	Informative parameter evaluated according to IEC 62788-2 are presented	See Annex 2	
	Single-layer sheet as well as entire multi-layer sheet in final application comply with following:		—
	- Minimum thickness according to lines 1b) of Table 3 and Table 4, (not less than 30µm) req./meas. (mm),:	See Table 49	
	- Dielectric strength for basic insulation is provided after cut susceptibility test (MST 12) (1000V + 2 times system voltage)	See Table 41	
	Test voltage (V):		—

5.6.3.4: Clearance and creepage distances

Table 1: Design evaluation

IS/IEC 61730 PART 2: REQUIREMENTS FOR TESTING

8 Testing
Test sequences see IS/IEC 61730-2: 2016 Deviations from test sequence are possible but must be documented. See also table 5-

10 TEST PROCEDURES			
10.1 General: Safety qualification testing included the following Module Safety Tests (MST) of IS/IEC 61730-2: 2016			
Initial Testing			
10.2	MST 01 – Visual inspection .....:	See appended Table 6	
10.3	MST 02 - Performance at STC .....:	See appended Table 7	
10.4	MST 03 – Maximum power determination .....:	See appended Table 8	
10.13	MST 16 – Insulation test .....:	See appended Table 9	
10.14	MST 17 – Wet leakage current test .....:	See appended Table 10	
10.11	MST 13 – Continuity test of equipotential bonding:	See appended Table 11	
10.9	MST 11 – Accessibility test .....:	See appended Table 12	
Sequence A			
10.26	MST 37 – Materials creep test.....:	See appended Table 13	
10.11	MST 13 – Continuity test of equipotential bonding:	See appended Table 11	
10.9	MST 11 – Accessibility test .....:	See appended Table 12	
Sequence B			
10.30	MST 53 – Damp heat test 200h.....:	See appended Table 14	
10.31	MST 54 – UV test 60kWh/m² .....:	See appended Table 15	
10.29	MST 52 – Humidity freeze test .....:	See appended Table 16	
10.31	MST 54 – UV test 60kWh/m² .....:	See appended Table 17	
10.29	MST 52 – Humidity freeze test .....:	See appended Table 18	
Sequence B1			
10.32	MST 55 – Cold conditioning.....:	See appended Table 19	
10.33	MST 56 – Dry heat conditioning .....:	See appended Table 20	
10.29	MST 52 – Humidity freeze test .....:	See appended Table 21	
10.32	MST 55 – Cold conditioning.....:	See appended Table 22	

10.29	MST 52 – Humidity freeze test .....:	See appended Table 23	
Sequence C			
10.31	MST 54 – UV test 15kWh/m² .....:	See appended Table 24	
10.28	MST 51 – Thermal cycling 50 test .....:	See appended Table 25	
10.29	MST 52 – Humidity freeze test .....:	See appended Table 26	
10.27	MST 42 – Robustness of terminations test.....:	See appended Table 27	
Sequence D			
10.30	MST 53 – Damp heat test.....:	See appended Table 28	
10.23	MST 34 – Static mechanical load test .....:	See appended Table 29	
Sequence E			
10.28	MST 51 – Thermal cycling 200 test .....:	See appended Table 30	
Sequence F			
10.19	MST 25 – Bypass diode thermal test.....:	See appended Table 31	
10.15	MST 21 – Temperature Test.....:	See appended Table 32	
10.16	MST 22 – Hot-spot endurance Test.....:	See appended Table 33	
10.20	MST 26 – Reverse current overload test.....:	See appended Table 34	
Sequence G			
10.12	MST 14 – Impulse voltage test .....:	See appended Table 35	
Other tests			
10.17	MST 23 – Fire Test .....:	See appended Table 36	
10.18	MST 24 – Ignitability test .....:	See appended Table 37	
10.21	MST 32 – Module breakage test.....:	See appended Table 38	
10.24	MST 35 – Peel test .....:	See appended Table 39	
10.25	MST 36 – Lap shear strength test .....:	See appended Table 40	
Final Testing			
10.10	MST 12 – Cut susceptibility test .....:	See appended Table 41	
10.11	MST 13 – Continuity test of equipotential bonding:	See appended Table 11	
10.9	MST 11 – Accessibility test.....:	See appended Table 12	
10.4	MST 03 – Maximum power determination.....:	See appended Table 42	

10.1	MST 01 – Visual inspection .....:	See appended Table 43	
10.6	MST 05 – Durability of markings.....:	See appended Table 44	
10.7	MST 06 – Sharp edge test.....:	See appended Table 45	
10.8	MST 07 – Bypass diode functionality test.....:	See appended Table 46	
10.22	MST 33a – General screw connections test.....:	See appended Table 47	
10.22	MST 33b – Locking Screw connections test.....:	See appended Table 48	
10.5	MST 04 – Insulation thickness test.....:	See appended Table 49	
Supplementary information:

ANNEX 1: LIST OF TEST EQUIPMENT USED:

Application	Identification	Description

ANNEX 2: CONSTRUCTIONAL DETAILS / BILL OF MATERIAL (BOM)

5.3.2 Internal wiring		
Cell connector		
Manufacturer:	Type:	Material:
Thickness [µm]:	Dimension [mm]:	Coatings:
Supplementary Information:		
String connector		
Manufacturer:	Type:	Material
Thickness [µm]:	Dimension [mm]:	Coatings:
Supplementary Information:		
5.3.3 External wiring and cables		
Cables		
Manufacturer:	Type:	Material:
Diameter [mm²]:	Length [mm]:	Max. Temperature:
Certified: ☐ Yes / ☐ No	Standards:	Others:
Certifier and Cert. No.	☐ IEC 62930 ☐ EN 50618	
Supplementary Information:		
5.3.4 Connectors		
Manufacturer:	Type:	Class:
Max. Voltage:	Max. Current:	Max. Temperature:
IP-rating:	Locked:	
	☐ Yes / ☐ No	
Certified: ☐ Yes / ☐ No	Standards:	Others:
Certifier and Cert. No.	☐ IEC 62852	
Supplementary Information:		
5.3.5 Junction boxes		
Manufacturer:	Type:	Class:
IP-rating:	Dimensions (l x w x h) [mm²]:	Weight [g]:
Max. Voltage:	Max. Current:	Max. Temperature:
Electrical Termination cell side:	Electrical Termination cell side:	Number of Bypass Diodes
Soldered ☐ Crimped ☐ Welded ☐ Screwed ☐ Screwless ☐	Soldered ☐ Crimped ☐ Welded ☐ Screwed ☐ Screwless ☐	
Potted:	Certified: ☐ Yes / ☐ No	Standards:
☐ Yes / ☐ No	Certifier and Cert. No.	☐ IEC 62790
Supplementary Information:		

5.3.6 Frontsheets and backsheets

Frontsheet		
Used as: ☐ Basic Insulation ☐ Reinforced Insulation		
Total Dimensions (width x length) [mm]:		
Material:	Manufacturer:	Type:
Glass		
Thickness [mm]:	Heat strength.: ☐ Yes / ☐ No	Coating: ☐ Yes / ☐ No
	☐ Tempered ☐ Heat strengthened ☐ Annealed	Description
Structured: ☐ Yes / ☐ No	Certified: ☐ Yes / ☐ No	Standards:
Description	Certifier and Cert. No.	
Supplementary Information:		
Single layer: ☐	Used as: ☐ Basic Insulation ☐ Reinforced Insulation	
Material:	Manufacturer:	Type:
Thickness [mm]	Thermal Index:	Material Group:
	☐ RTE °C ☐ TI °C ☐ RTI °C	☐ I ☐ II ☐ III
Colour:	Certified ☐ Yes / ☐ No	Standards:
	Certifier and Cert. No.	
Supplementary Information:		
Multi-layer ☐	Used as: ☐ Basic Insulation ☐ Reinforced Insulation	
Material:	Manufacturer:	Type:
Total Thickness [mm]:	No of layers:	
Layer No. 1 (air side)	Used as: ☐ Basic Insulation ☐ Reinforced Insulation	
Material:	Manufacturer:	Type:
Thickness [mm]	Thermal Index:	Material Group:
	☐ RTE °C ☐ TI °C ☐ RTI °C	☐ I ☐ II ☐ III
Colour:	Certified ☐ Yes / ☐ No	Standards:
	Certifier and Cert. No.	
Layer No. 2	Used as: ☐ Basic Insulation ☐ Reinforced Insulation	
Material:	Manufacturer:	Type:
Thickness [mm]	Thermal Index:	Material Group:
	☐ RTE °C ☐ TI °C ☐ RTI °C	☐ I ☐ II ☐ III
Colour:	Certified ☐ Yes / ☐ No	Standards:
	Certifier and Cert. No.	
Layer No. 3	Used as: ☐ Basic Insulation ☐ Reinforced Insulation	
Material:	Manufacturer:	Type:
Thickness [mm]	Thermal Index:	Material Group:
	☐ RTE °C ☐ TI °C	☐ I ☐ II

	☐ RTI °C	☐ III
Colour:	Certified ☐ Yes / ☐ No	Standards:
	Certifier and Cert. No.	
Layer No. n (Encapsulation side)	Used as: ☐ Basic Insulation ☐ Reinforced Insulation	
Material:	Manufacturer:	Type:
Thickness [mm]	Thermal Index:	Material Group:
	☐ RTE °C ☐ TI °C ☐ RTI °C	☐ I ☐ II ☐ III
Colour:	Certified ☐ Yes / ☐ No	Standards:
	Certifier and Cert. No.	
Supplementary Information:		
Backsheet		
Used as: ☐ Basic Insulation ☐ Reinforced Insulation		
Material:	Manufacturer:	Type:
Glass		
Thickness [mm]:	Heat strength.: ☐ Yes / ☐ No	Coating: ☐ Yes / ☐ No
	☐ Tempered ☐ Heat strengthened ☐ Annealed	Description
Structured: ☐ Yes / ☐ No	Certified: ☐ Yes / ☐ No	Standards:
Description	Certifier and Cert. No.	
Supplementary Information:		
Single layer: ☐	Used as: ☐ Basic Insulation ☐ Reinforced Insulation	
Material:	Manufacturer:	Type:
Thickness [mm]	Thermal Index:	Material Group:
	☐ RTE °C ☐ TI °C ☐ RTI °C	☐ I ☐ II ☐ III
Colour:	Certified ☐ Yes / ☐ No	Standards:
	Certifier and Cert. No.	
Supplementary Information:		
Multi-layer ☐	Used as: ☐ Basic Insulation ☐ Reinforced Insulation	
Material:	Manufacturer:	Type:
Total Thickness [mm]:	No of layers:	
Layer No. 1 (air side)	Used as: ☐ Basic Insulation ☐ Reinforced Insulation	
Material:	Manufacturer:	Type:
Thickness [mm]	Thermal Index:	Material Group:
	☐ RTE °C ☐ TI °C ☐ RTI °C	☐ I ☐ II ☐ III
Colour:	Certified ☐ Yes / ☐ No	Standards:
	Certifier and Cert. No.	
Layer No. 2	Used as: ☐ Basic Insulation ☐ Reinforced Insulation	
Material:	Manufacturer:	Type:

Thickness [mm]	Thermal Index:	Material Group:
	☐ RTE °C ☐ TI °C ☐ RTI °C	☐ I ☐ II ☐ III
Colour:	Certified ☐ Yes / ☐ No	Standards:
	Certifier and Cert. No.	
Layer No. 3	Used as: ☐ Basic Insulation ☐ Reinforced Insulation	
Material:	Manufacturer:	Type:
Thickness [mm]	Thermal Index:	Material Group:
	☐ RTE °C ☐ TI °C ☐ RTI °C	☐ I ☐ II ☐ III
Colour:	Certified ☐ Yes / ☐ No	Standards:
	Certifier and Cert. No.	
Layer No. n (Encapsulation side)	Used as: ☐ Basic Insulation ☐ Reinforced Insulation	
Material:	Manufacturer:	Type:
Thickness [mm]	Thermal Index:	Material Group:
	☐ RTE °C ☐ TI °C ☐ RTI °C	☐ I ☐ II ☐ III
Colour:	Certified ☐ Yes / ☐ No	Standards:
	Certifier and Cert. No.	
Supplementary Information:		
5.3.7 Insulation barriers / Edge sealant		
Used as: ☐ Functional ☐ Basic Insulation ☐ Reinforced Insulation		
Total Dimensions (width x length) [mm]:		
Material:	Manufacturer:	Type:
Thickness [mm]	Thermal Index:	Material Group:
	☐ RTE °C ☐ TI °C ☐ RTI °C	☐ I ☐ II ☐ III
Colour:	Certified ☐ Yes / ☐ No	Standards:
	Certifier and Cert. No.	
Supplementary Information:		
5.3.9 Encapsulants		
Used as: ☐ Basic Insulation ☐ Reinforced Insulation ☐ N/A		
Total Dimensions (width x length) [mm]:		
Material: (Frontsheet side)	Manufacturer:	Type:
Thickness [mm]	Thermal Index:	Material Group:
	☐ RTE °C ☐ TI °C ☐ RTI °C	☐ I ☐ II ☐ III
Colour:	Certified ☐ Yes / ☐ No	Standards:
	Certifier and Cert. No.	

Material: (Backsheet side)	Manufacturer:	Type:

Thickness [mm]	Thermal Index:	Material Group:
	☐ RTE °C ☐ TI °C ☐ RTI °C	☐ I ☐ II ☐ III
Colour:	Certified ☐ Yes / ☐ No	Standards:
	Certifier and Cert. No.	
Supplementary Information:		

5.5.2.3 Polymeric materials used as electrical insulation		
Location:		
Application ☐ External part ☐ Support of live parts ☐ Mechanical functions		
Used as: ☐ Functional ☐ Basic Insulation ☐ Reinforced Insulation		
Material:	Manufacturer:	Type:
Flammability class:		
Thickness [mm]	Thermal Index:	Material Group:
	☐ RTE °C ☐ TI °C ☐ RTI °C	☐ I ☐ II ☐ III
Colour:	Certified ☐ Yes / ☐ No	Standards:
	Certifier and Cert. No.	
Supplementary Information:		
Location:		
Application ☐ External part ☐ Support of live parts ☐ Mechanical functions

Thickness [mm]	Thermal Index:	Material Group:
	☐ RTE °C ☐ TI °C ☐ RTI °C	☐ I ☐ II ☐ III
Colour:	Certified ☐ Yes / ☐ No	Standards:
	Certifier and Cert. No.	
Supplementary Information:		

5.3.10 Bypass Diodes		
Manufacturer:	Type:	
Nominal current of diode I_F (A)		
R_{THJ-C} (K/W) / R_{THJ-L} (K/W)		
Max. T_J (°C)		
Max. V_F at I_F (V)		
Supplementary Information:		

5.4.2 / 5.4.4 Screws			
Application	Kind of screw:	Dimension (diameter/length)	Material

Supplementary Information:

5.4.3 Rivets		
Application	Dimension (diameter/length)	Material:
Supplementary Information:		

5.4.6 Adhesives		
For Junction Boxes		
Manufacturer:	Type:	
Additional function as: ☐ Basic Insulation ☐ Reinforced Insulation ☐ N/A		
Thickness [mm]	Thermal Index:	Material Group:
	☐ RTE °C ☐ TI °C ☐ RTI °C	☐ I ☐ II ☐ III
Supplementary Information:		
For Frames / Backrails		
Additional function as: ☐ Basic Insulation ☐ Reinforced Insulation ☐ N/A		
Manufacturer:	Type:	
Additional function as: ☐ Basic Insulation ☐ Reinforced Insulation ☐ N/A		
Thickness [mm]	Thermal Index:	Material Group:
	☐ RTE °C ☐ TI °C ☐ RTI °C	☐ I ☐ II ☐ III
Supplementary Information:		

5.5.3 Metallic Materials		
Frame / Corner joint / Backrail:		
Manufacturer:	Type:	Dimension
Supplementary Information:		
Others:		
Manufacturer:	Type:	Dimension
Supplementary Information:		

Cell

Kind of cell	Manufacturer:	Type:
☐ cSi ☐ CdTe ☐ aSi ☐ CiGs		
Thickness [µm]:	Dimension [mm]:	Number of busbars:
Supplementary Information:		

Cell fixing Tape
